VASCO Compatibility Sheet
Watchguard

Authentication Method	Licensing
☑ Response Only	☑ Named user based
☑ Challenge/Response	
☐ Signature	

Summary

Watchguard is one of the leaders in firewall appliances and VPN appliances. While firewalls protect main data and systems access, VPN creates a Virtual Private Network between the VPN user and the corporate network allowing users to access their resources. Vasco offers solutions to allow users to authenticate themselves with a One Time Password, more specific, with a Vasco Digipass. The Vacman Radius Middleware authenticates requests from the Watchguard firewall/VPN systems. This Permits an administrator to safeguard Corporate access!

Supported partner products

- ☑ Firebox II , III Series
- ☑ Firebox X Series (X500/X700/X1000/X2500)
- ☑ Firebox Vclass (V10/V60L/V60/V80/V100/V200)
- ☑ MU VPN

Required VASCO products

- ☑ Vacman Radius Middleware 2.0.3*, 2.1, 2.2
- ☑ Digipass GO1, GO3, DP PRO300, DP for Windows

or

- ☑ Digipass Pack for Watchguard (Radius) – Commercial bundle including Digipass tokens and necessary Vacman middleware Software

Features

- ☑ Dynamic User Registration (DUR)
- ☑ Auto Learn
- ☑ Automatic Token Assignment
- ☑ Token Self Registration
- ☑ CSV File Import
- ☑ Active Directory, MS-Access, SQL or Oracle can be used as database

Additional information

- ☑ Digipass Pack for Watchguard - White Paper
- ☑ Digipass Go-1, Go-3, Pro 300, Digipass for Windows - Leaflets
- ☑ VACMAN Middleware product documentation

Remarks

* when IPSEC is configured , CHAP is necessary. Vacman Middleware 2.0.3 does not support this. Vacman Radius Middleware 2.1 does.
Challenge Response authentication is only supported when "Firewall Authentication" is used not for setting up VPN Tunnels.
